Professional Profile

Computer Science student at Eötvös Loránd University with full-stack development experience spanning front-end and back-end technologies, complemented by hands-on quality assurance experience. Built responsive, JavaScript and React-based web interfaces during a Frontend Development Internship at CodeSentinel and in independent projects (TaskFlow Pro, personal portfolio website), alongside a layered, database-driven Java system (Food Ordering System) using JDBC, MySQL, and Maven. Completed a QA Engineering Internship at Azerconnect Group, performing manual testing, API testing, bug reporting, and test automation. Applied Object-Oriented Programming, Data Structures & Algorithms, and JUnit-based testing to deliver modular, maintainable, and reliable applications. Gained hands-on experience during three internships (Azerconnect, YeloBank, CodeSentinel), collaborating within Agile workflows on feature development, testing, and code quality. Fluent in English, eager to contribute across the full software development lifecycle as a Software Engineer, Full Stack Intern, or QA Engineer.

Technical Skills

- **Quality Assurance:** Manual Testing, Test Case Design & Execution, API Testing, Bug Reporting & Tracking, Test Automation
- **Front-End:** HTML5, CSS3, JavaScript, React, DOM Manipulation, Responsive Web Design
- **Back-End:** Java, SQL, JDBC, MySQL, Maven
- **Programming Languages:** Java, Python, JavaScript, SQL, C#, C
- **Engineering Practices:** Object-Oriented Programming (OOP), Data Structures & Algorithms, JUnit 5, Git, GitHub, Agile Collaboration, Clean Code

Experience

ELTE Data Science Club - Project Member

Budapest, Hungary

Sep 2026 - Present

- Joined as a project member of a student-run data science community that grew from a small founding group to 100+ members, hosting speaker sessions from Schneider Electric, SAP, and Bosch, and a hackathon co-hosted in Budapest.
- Forming a project team from this semester's tracks – F1 race analytics, esports match prediction, fraud detection, and drone tracking with computer vision – applying data analysis and machine learning to real data.

Azerconnect Group - QA Engineering Intern

Baku, On-site

Jun 2026 - Sep 2026

- Performed manual and API testing, writing and executing test cases to verify software functionality, validate backend data integrity, and identify defects.
- Reported and tracked bugs, collaborating with developers to verify fixes, and contributed to test automation efforts and real testing projects.
- Collaborated within a team environment as part of the broader QA and development workflow.

YeloBank - IT Intern (Summer Challenge 2025)

Baku, On-site

Jun 2025 - Sep 2025

- Developed and maintained Java application features using Object-Oriented Programming (OOP) principles, contributing to a web application by implementing new functionality and improving existing components.
- Collaborated with software engineers to test, debug, and optimize application performance and code quality.
- Participated in Agile development activities, including team collaboration, code reviews, and feature implementation.

CodeSentinel - Frontend Development Intern

Remote

Sep 2025 - Nov 2025

- Completed a 3-month remote Frontend Development Internship, building responsive web applications using HTML, CSS, JavaScript, and React.
- Worked on practical, project-based tasks to strengthen front-end development skills and improve UI/UX design, collaborating using Git/GitHub within a mentorship-driven, remote team workflow.
- [CodeSentinel Frontend Development Internship Certificate \(2025\)](#)

Education

Eötvös Loránd University - BSc Computer Science

Budapest, Hungary

2024 - 2027 (Present)

- Relevant Coursework: Web Programming, Data Structures & Algorithms, Object-Oriented Programming, Calculus, Software Engineering, Operating Systems, Concurrent Programming, Python.

Projects

Food Ordering System - Java, MySQL, JDBC, Maven, Git

[View Project](#)

- Designed and developed a modular Food Ordering System using Java, MySQL, and JDBC following layered architecture and Object-Oriented Programming (OOP) principles, with CRUD operations, relational database integration, input validation, and custom exception handling for customer, restaurant, menu, cart, and order management.
- Applied Java Collections Framework, SQL, Maven, JUnit 5, and clean software engineering practices to develop a maintainable and scalable application.

TaskFlow Pro - HTML, CSS, JavaScript, Git

[View Project](#)

- Designed and developed a responsive Task Management Web Application using HTML5, CSS3, and JavaScript with a modular architecture, implementing CRUD operations, task categorization, priority management, search, filtering, and persistent data storage via the Local Storage API.
- Applied DOM manipulation, responsive web design, event-driven programming, and clean code practices.

Personal Portfolio Website - HTML, CSS, JavaScript, Netlify

[View Project](#)

- Designed and built a single-page personal portfolio website with dedicated sections for education, technical skills, experience, and projects, using HTML5, CSS3, and JavaScript with a responsive, dark-themed UI.
- Deployed and maintained the site on Netlify, diagnosing and resolving a publish-directory configuration issue to enable reliable continuous deployment.
