Professional Profile

Computer Science student at Eötvös Loránd University with practical experience building responsive, JavaScript-driven web applications, including a task management web app (TaskFlow Pro) and a personal portfolio site deployed on Netlify. Strong fundamentals in HTML5, CSS3, and JavaScript, including DOM manipulation, event-driven programming, and responsive UI design. Familiar with Git-based version control, Agile collaboration, and Object-Oriented Programming, gained through internships at YeloBank and CodeSentinel and coursework in Web Programming and Software Engineering. Fluent in English, eager to contribute as a Frontend Software Engineer Intern within an agile development squad.

Technical Skills

- **Front-End:** JavaScript, HTML5, CSS3, DOM Manipulation, Responsive Web Design, Event-Driven Programming
- **Programming Languages:** JavaScript, Java, Python, SQL, C#, C
- **Version Control & Tools:** Git, GitHub, Maven, JUnit 5, MySQL, JDBC
- **Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms, Software Engineering, Database Design, Concurrent Programming, Clean Code, Agile Collaboration

Experience

YeloBank - IT Intern (Summer Challenge 2025)

On-site

Jul 2025 - Aug 2025

- Developed and maintained Java application features using Object-Oriented Programming (OOP) principles.
- Contributed to the development of a web application by implementing new functionality and improving existing components.
- Collaborated with software engineers to test, debug, and optimize application performance and code quality.
- Participated in Agile development activities, including team collaboration, code reviews, and feature implementation.

CodeSentinel - Software Development Intern

Remote

Aug 2025 - Oct 2025

- Developed a Java-based Parking Lot Management System by applying Object-Oriented Programming (OOP) principles and modular software design.
- Designed and implemented unit tests with JUnit to improve code quality, reliability, and application stability.
- Collaborated on software development tasks, debugging, and feature implementation throughout the internship.
- [CodeSentinel Software Development Internship Certificate \(2025\)](#)

Education

Eötvös Loránd University - BSc Computer Science

Budapest, Hungary

2024 - 2027 (Present)

- Relevant Coursework: Web Programming, Data Structures & Algorithms, Object-Oriented Programming, Calculus, Software Engineering, Operating Systems, Concurrent Programming, Python.

Projects

TaskFlow Pro - HTML, CSS, JavaScript, Git

[View Project](#)

- Designed and developed a responsive Task Management Web Application using HTML5, CSS3, and JavaScript with a modular architecture, implementing CRUD operations, task categorization, priority management, search and filtering, form validation, and persistent data storage via the Local Storage API.
- Applied DOM manipulation, responsive web design, event-driven programming, and clean code practices to deliver a scalable and user-friendly application.

Personal Portfolio Website - HTML, CSS, JavaScript, Netlify

[View Project](#)

- Designed and built a single-page personal portfolio website with dedicated sections for education, technical skills, experience, and projects, using HTML5, CSS3, and JavaScript with a responsive, dark-themed UI.
- Deployed and maintained the site on Netlify, diagnosing and resolving a publish-directory configuration issue to enable reliable continuous deployment.

Food Ordering System - Java, MySQL, JDBC, Maven, Git

[View Project](#)

- Designed and developed a modular Food Ordering System using Java, MySQL, and JDBC following layered architecture and Object-Oriented Programming (OOP) principles, with CRUD operations, relational database integration, input validation, and custom exception handling for customer, restaurant, menu, cart, and order management.
- Applied Java Collections Framework, SQL, Maven, and clean software engineering practices to develop a maintainable and scalable application.

Library Management System

[View Project](#)

- Designed and developed a Library Management System using Java, Maven, and a layered software architecture, implementing CRUD operations, file persistence, input validation, and custom exception handling for book, user, and loan management.
- Applied Object-Oriented Programming (OOP), the Java Collections Framework, and JUnit 5 to build a modular, maintainable, and tested application.
